

# Cement Slurry

Portland cement for soil stabilization, modification and FDR (Full Depth Reclamation)

## Contractor Advantages

- 1) Reduce production time.
- 2) Reduce the amount of water needed.
- 3) Reduce the number of workers.
- 4) Reduce clean up.
- 5) Reduce equipment maintenance.
- 6) Reduce equipment filters and parts.
- 7) Reduce cost per hour.
- 8) Reduce the need of berms.
- 9) Use the same equipment and placement techniques.
- 10) Can place on windy days.

## Engineer Advantageous

- 1) Increase accuracy of placement.
- 2) Increase consistency of application rate.
- 3) Increases the ability to achieve specified design.
- 4) Slurry is contained in placement area.
- 5) Increase contractor time to achieve density.
- 6) Batching of raw materials is weighed on load cells.
- 7) Computerized batching system produces consistent load after load.
- 8) Control hydration and physical properties of Portland cement.

## Environmental, Safety and Health

- 1) Eliminates airborne particles.
- 2) Driver visibility is not reduced while driving near construction zone and reduces accidents.
- 3) Increase health and safety by not breathing or coming into contact with airborne particles.
- 4) Decreases property damage.
- 5) Meets OSHA requirement Section 1926.1158.
